✅ Although the images shown above have nearly identical resolutions, the lighting conditions during the photo capture significantly impact their clarity and the level of noise present.

✅ Images with dimensions of 1920px or larger are ideal for the screens we use and are designed to be viewed from a distance of 6 feet.

❌ This image size is suitable for thumbnails and avatars, but viewing it on larger screens may impact its clarity.

❌ As a general guideline, photos smaller than 1920px will appear noticeably pixelated when viewed on the screen from a 6-foot distance.

Friendly Tip: Using the highest-quality camera available will ensure better photos for an optimal viewing experience.
